- Modern Design

Technical Data

Thermoplastic Acrylic
Filter Fiber
3.5" Length x 1/4" I.D. x 3/8" O.D.

Installation

Drill weep hole 3/8" and blow out
with compressed air before installing
the Drain Only Weep Tube

A 3.5" inch acrylic tube filled with non-woven geo-textile that acts as a wick to draw moisture through the tube and out of the building. At one end the tube is bent in a downward position to prevent wind driven rain from being forced back into the tube. This unique bend also prevents water from running down the wall and re-entering the building. The drain only tubes can be set into newly drilled or already existing weep holes. The drain only tubes will not fill with sediment because of the fabric filters, which still allow water to pass through. Custom sizes are also available.
